Laying the Foundation for a Better Urban Future

IHC Annual Report

2016
Dear Friends of IHC Global:

2016 was an important and successful year for IHC Global. On behalf of the Board of Directors I would like to thank the staff, advisors, members, partners and supporters of IHC Global for their help and continued interest in making the organization an important voice for urban concerns. I would especially like to thank Judith Hermanson, our CEO and President, for her leadership and management skills.

Our efforts this year helped raise awareness about the impacts and implications of widespread urbanization, and expanded knowledge on how to address the challenges and opportunities it poses. IHC’s involvement in international meetings such as Habitat III helped highlight the importance of cities in promoting greater equality and justice and the importance of the private sector in fostering urban growth and development.

Looking ahead to 2017, IHC Global expects to give priority attention to implementation of the 2030 development agenda. While the theoretical development framework for urban development has been created, the challenge going forward is to identify, develop and implement the programs, policies, financial resources and institutional relationships needed to achieve the development agenda, taking into account the unique features and circumstances of cities and countries in the developing world.

IHC Global is grateful for the ongoing support it received in 2016 from its founding sponsors, Habitat for Humanity International and the National Association of Realtors (NAR), as well as an important grant from the Wallace Genetic Foundation. Above all, we are extremely grateful to the support from our member organizations and individual members, our partners in the important work of making cities that work for all.

We look forward to another year of helping to change cities for good.

Bob Dubinsky
Chairman of the Board

“Our struggle for global sustainability will be won or lost in cities,” — Outgoing UN Secretary-General Ban Ki-moon

The outgoing UN Secretary General Ban-Ki Moon made a true statement when he said that the future of sustainable development will be won or lost in cities. This year, IHC Global worked hard to ensure that the future of cities – and so also of this planet – will be secure and prosperous for the many rather than the few. The IHC Global Coalition is composed of individuals, civil society and private sector organizations which together provide a powerful voice for change.

IHC Global has focused historically on the poorest people living in urban slums in the developing world. We will continue to provide that focus as arguably that is where the need is the greatest and the inequalities the most visible and corrosive. However, in adding “Global” to our name, we intentionally include all urban areas of great inequality and inequity. Moreover, we believe that an equitable city meets the needs of all its citizens and residents.

We aim for and define city inclusiveness as having spatial, economic, social and psychological dimensions, all of which are important to the lives that people are able to lead. We provide tools for practice, advocacy and policy that can be used locally throughout the world. We advocate globally for inclusiveness and greater equality and nationally within the US. We also bridge the local and global conversations, bringing local perspectives to global dialogue and global issues to local leaders.

In IHC Global’s work, as we actively seek and share solutions, we focus on the “positives” — what changes will bring about in terms of human potential, innovation and shared prosperity. We know that as our world evolves becoming increasingly urban, the global community has the power and means to continue history’s trajectory of progress, making that future ever better for all of us. However, we are also mindful of the “negatives” — what happens if these changes do not occur at sufficient scale and with sufficient timeliness. Cities are the places where the most pressing 21st century challenges converge. Thus, the security, safety and health risks of cities are strategic concerns for the entire global community. IHC Global is committed to supporting positive change in cities through advocacy and education, through making sure that “inclusiveness” means everyone, and through keeping a constant light shining on the crucial global importance of “getting cities right.”

We are grateful to our Coalition members for their support for IHC Global’s mission and will continue to build and expand this Coalition. It requires vigilance and vigor from a broad-based independent coalition to change cities for good and so to unleash innovation and productivity that will benefit us all! Our work has never been so important, and it would be impossible without you.

Judith Hermanson
President and CEO
IHC Global
About Us

Co-founded and supported by the National Association of Realtors (NAR) and Habitat for Humanity International (HFHI), IHC Global is an independent, non-profit global membership coalition of NGOs, civil society organizations, private sector companies, corporations, and individuals committed to equitable urban development and sustainable, inclusive cities.

IHC Global is an advocate for Goal 11 of the 2030 Global Agenda for Sustainable Development, which directs cities to become inclusive, resilient, safe and sustainable. IHC is committed to the principle that greater income equality and greater prosperity for all result from an integrated, resource-supported plan for the development of spatially, socially and economically inclusive cities. For more information, please visit our website at www.ihcglobal.org.
IHC Global: An Urban Mission for an Urban World

The world is crowded, and there are no vacancies: of the over seven billion people living in the world, more than half of them are working, renting, sleeping, eating, driving, raising children — living — in cities. With projected growth in mind, it is estimated that over 65% of the world — over 6 billion people — will be living in cities by 2050.

Our world is defined by cities and urban places. The form, function and relative size of urban areas varies quite considerably. Nonetheless, more than half of us live urban lives benefiting from the many economic, cultural and other amenities cities offer. Education, health and social services, together with general enrichment of life are among those.

Although there is no standard definition of a city, Louis Wirth’s framing of cities as large, permanent settlements characterized by high density and heterogeneous populations stands us in good stead.

Urbanization has long been associated with economic growth, and cities have historically been the places where innovation is sparked and individual well-being improved. Although historically the rise of cities is associated with economic development and progress, the jury is out as to whether the current growth will follow that same trajectory. One thing that is certain is that with today’s urban growth, inequality and inequity are increasing. As the world becomes more connected and intertwined, urban issues that have persisted for decades are reaching a crescendo. Today, approximately 1 billion people live in slums, where the benefits of city living are for the most part eluded. By 2030 — in just 13 years — this number is projected to double to 2 billion. As the refugee crisis continues to shake and rattle the world, the over 60 million refugees and migrants are trading displaced persons camps for cities more than ever before. Nearly two billion people worldwide lack access to safe water and adequate sanitation; cities are responsible for up to 70% of greenhouse gas emissions; women make up only a tiny fraction of urban landowners worldwide; and the trans-border threats to stability, security, health and environment that accompany rapid urban growth are real for us all.

Virginia: 30% of the world’s population was urban

Today, 54% of the world’s population is urban

By 2050, 66% of the world’s population is projected to be urban

So, that is where the IHC Global Coalition for Inclusive Housing and Sustainable Cities comes in. The IHC Global Coalition is composed of civil society, private sector and individuals committed to and knowledgeable about the global, national and local urban challenges.
IHC Global:
• Raises awareness about the issues
• Educates people about equitable urban development
• Advocates for policy and practice change
• Provides accessible and evidence-informed solutions
• Develops and shares knowledge
• Supports Member action on the ground

IHC Global works for practical results and visible improvement in people’s lives. We see cities as complex systems that require integrated program planning and actions. We believe that civil society (including communities) and the private sector have necessary roles to play to make cities more equitable and equal. IHC Global is an amplifier. IHC Global is a multiplier. IHC Global is an accelerator.

Gateways and Drivers: Key policy areas

IHC Global’s new website, launched in May 2016, provides a knowledge resource for our members and for others interested in the urban space. It provides information on six key areas that we believe are “wedges” which can lever change sectorally and more broadly.

• Housing, including in situ, comprehensive urban upgrading, as a driver of urban development
• Urban Water and Sanitation
• Urban Food Security
• Resilience and climate change adaptation
• Migration and its implications
• Secure tenure, land, property rights and markets, with a gender focus
A Renewed Global Focus on Cities

As IHC Global re-aligned its mission and its approaches in 2016, so the world focused collectively on the mounting issues of urbanization. IHC Global was honored to participate in many global conferences and to engage with partners and others to bring the message of the cities, particularly of those most vulnerable and marginalized, to center court.

Several important achievements in 2015 set the stage for the monumental focus on cities that would follow. The 2030 Sustainable Development Agenda (Agenda 2030), which aims to eradicate poverty by 2030, was adopted in 2015 by 193 countries. Agenda 2030 and its 17 goals is ambitious and far-reaching. SDG 11 pays a special interest to urban issues, setting a goal to make cities and human settlements inclusive, safe, resilient and sustainable by 2030.

The Paris Climate Agreements followed with an astounding 194 United Nations Framework Convention on Climate Change (UNFCCC) members pledging to limit the effects of climate change. The Agreement, heavily campaigned for by city mayors from around the world, gave cities a large and powerful role in ensuring implementation.

With these landmark international agreements in place, in 2016 the global community turned to setting a new agenda for cities — one that embraced the right that all people have to inhabit and shape the cities of the future.

Habitat III and a New Urban Agenda

Much of the back-breaking work and progress in sustainable urbanization in 2016 revolved around the drafting of the New Urban Agenda, a document that sets the global standards to guide sustainable urban development efforts over the next 20 years. The document will serve as the blueprint for nations on how to achieve urban development that is in line with Global Development Goal 11 — that is, urban development that is inclusive, safe, resilient, and sustainable. The New Urban Agenda went through many iterations and amendments throughout the course of the year, before finally being adopted by UN member countries at the third UN Conference on Housing and Sustainable Urban Development, known as Habitat III, in October in Quito, Ecuador. The conference, in which IHC Global was privileged to participate, set an important goal of connecting the global to the local, in order to implement inclusive and sustainable urban development in all levels of society. Connecting global and local actors remains of upmost importance in order to implement the New Urban Agenda, and IHC Global will continually seek to do this through our events, publications, and website.

“We share a vision of cities for all, referring to the equal use and enjoyment of cities and human settlements, seeking to promote inclusivity and ensure that all inhabitants, of present and future generations, without discrimination of any kind, are able to inhabit and produce just, safe, healthy, accessible, affordable, resilient and sustainable cities and human settlements to foster prosperity and quality of life for all.” — The New Urban Agenda
The dialogue about sustainable development was not confined to governments. Civil society and the private sector had a robust presence in 2016 to support global urban innovation, especially concerning the New Urban Agenda.

**Attendance at Habitat III in Quito**

>30,000 participants total, including:

- 10,000 international participants from 167 countries
- Representatives from 140 National Governments
- 11 Presidents
- 200 Mayors
- Delegations from 500 cities

Many voices were heard during the lead-up to Habitat III. UN Habitat’s **World Urban Campaign** (WUC) supported participation of stakeholders in the process and also launched the **General Assembly of Partners** at the Second Preparatory Committee for Habitat III (PrepCom 2) in April 2015. The GAP aimed “to serve as an interim broad-based deliberative platform for non-governmental partners in order to develop a consensus for a joined outcome document.” Throughout 2016, the GAP served as a platform for diverse — and sometimes conflicting — views to be brought forward. IHC Global, a Lead Partner of the WUC and a member of the Civil Society Organization committee of the GAP, actively engaged through these organizations as well as through other direct avenues to add its voice on behalf of greater inclusiveness and the importance of Global Goal 11.

At Habitat III, attended by 50,000 people, structured dialogue took place on a variety of urban topics. UN Habitat held a competitive process for organizations wishing to participate in the official program and dialogue. They reviewed proposals that aligned with Habitat III’s six thematic areas for networking and side events. These focused on a wide variety of issues, from the power of global youth in achieving change, to the importance of investment in implementing the New Urban Agenda. IHC Global was successful in being selected to organize and participate in 10 such events over the five-day conference, collaborating in most cases with our members and partners.

**Habitat III Thematic Areas**

- **Area 1: Social Cohesion and Equity: Livable Cities**
- **Area 2: Urban Frameworks**
- **Area 3: Spatial Development**
- **Area 4: Urban Economy**
- **Area 5: Urban Ecology and Environment**
- **Area 6: Urban Housing and Basic Services**

Implementation of the New Urban Agenda remains an ambitious effort, as does the monitoring of progress made. But IHC Global is hopeful that the unprecedented focus on inclusive and sustainable urban development that has been seen in the past year will sustain and accelerate. It is IHC Global’s commitment to support that process and continue to support equitable urban development. We are optimistic that with the support of our members and others in the global urban community that the events of 2015–2016 will be effective catalysts for global and local policies and investments to change cities for good.
Highlights and Illustrative Accomplishments of the Year

**30:** Policy Events in which IHC played a key role as part of processes associated with Habitat III

**10:** Panels organized and/or participated in at the Habitat III conference in Quito

**27:** New members

**769:** Followers gained on Twitter since our Twitter launch in May

**49:** Weekly Urban Update Newsletters

**10,000:** Website visits since the launch of our new website in May

**11:** Significant Policy papers

**>2000:** IHC Global Event Attendees and network members reached

Source: Wateraid
Awareness, Advocacy, and Education

From our weekly urban policy newsletter to our global events, from our academic reports to our tweets, we advocate for cities that are inclusive and sustainable. We act as an aggregating voice through our broad and diverse coalition, influencing policy around key urban equity drivers.

**IHC Global launches expanded mandate at Inaugural Open Forum**

In May, IHC Global hosted an open forum on Cities, Housing, and the Urban Poor at the Omni Shoreham Hotel. The successful program featured senior officials and policymakers from the U.S. Department of Housing and Urban Development, the U.S. Department of State, and the Inter-American Development Bank. The forum was held during the same time as the annual meeting of the National Association of Realtors and, over 100 private sector representatives and other guests attended.

In addition, the Forum marked the official launch of IHC Global’s expanded mission and mandate as a global coalition for inclusive housing and sustainable cities that advances equitable urban development. IHC Global President and CEO Judith Hermanson stressed the importance of the new mandate, especially in this time when cities are growing in importance on the global stage. Speakers discussed the upcoming Habitat III conference and reflected on the opportunities it creates for countries to begin applying comprehensive and integrated urban development strategies.
Achieving Inclusiveness: The Challenge and Potential of Informal Settlements

“Informal settlements can be both catalyst and vehicle for the achievement of greater inclusiveness while fostering innovation, creating jobs and developing social capital.” — Judith Hermanson

As part of IHC Global’s efforts to raise awareness and educate on inclusive cities, President and CEO Judith Hermanson wrote an article published in Citiscope this year on how upgrading slums can be a way to foster equitable development. While many articles focus on the multitude of challenges posed by informal settlements and speak of slums in terms of ‘poverty and squalor’, Hermanson paints a different picture, focusing on the vast potential that residents of informal settlements hold for stimulating local economies, fostering innovation, and building social capital. Her article focuses on how to unlock this potential by enacting comprehensive slum upgrading strategies that enable better social, physical, and economic inclusion of slum residents. Slum upgrading programs should not be viewed as a drain on city resources, but rather as an investment in the future that will make cities more productive and prosperous by unlocking untapped human potential.

IHC Global has a broad range of institutional affiliations and partnerships through which we expand our advocacy efforts and broaden our knowledge base. This year we signed Memoranda of Understanding with UN Habitat to become a Lead Partner of the World Urban Campaign and with Habitat for Humanity International to become a supporting advocacy partner of the Solid Ground Campaign, as well as continuing our membership in internationally focused consortia InterAction, and the Society for International Development. IHC Global also has a reciprocal membership with the US-focused National Housing Conference.
Additional Advocacy and Policy Dialogues

- Co-hosted an event called “Cities in an Age of Insecurity” with the Atlantic Council
- Successfully advocated for and co-authored a section on Urbanization in InterAction’s Foreign Assistance Briefing Book to the new U.S. Presidential Administration
- Co-hosted an event titled “Beyond Habitat III: Integrating Urban Equity and Climate Resilience into the New Urban Agenda” with USAID and RTI
- Signed on to a variety of advocacy letters from the international development community to government leaders, including the UN Secretary General and the Foreign Relations Committee
- Co-hosted a World Habitat Day event on Secure Housing, Women’s Right to Land, and the New Urban Agenda with the Solid Ground Campaign at the Inter-American Development Bank
- Presented at the State Department on inclusiveness as a component of data collection and application to achieve more equitable cities
No Time to Waste

“It is not just about building houses; it is about building cities”
— Eduardo Rojas

This is one of the key findings that emerged from IHC Global’s “No Time to Waste” publication, which synthesizes research and knowledge of over 50 years of housing policy in Latin America and extracts key lessons learned that can be applied to rapidly urbanizing countries. IHC Global commissioned former Lead Urban Specialist of the Inter-American Development Bank, Eduardo Rojas, to write this report based on his extensive experience working on housing policy in Latin America and an integrated reading of literature on the subject.

The report went through an extensive and interactive peer review process. A select group of internationally recognized housing policy and practice experts was convened for a dialogue at the Ford Foundation in September to provide substantive commentary and feedback on an initial draft of the paper. Their commentary and feedback was incorporated into a second draft of the paper.

IHC Global hosted another dialogue event at the Habitat III conference in Quito on Next City’s World Stage, where, following a presentation of the report findings from Rojas, panelists from around the world as well as audience members were invited to consider the findings and provide additional thoughts and commentary. The event produced a rich discussion about the importance of consistent, integrated, and practical housing policy that recognizes that housing is fundamentally about people.

Incorporating input and suggestions from these two interactive events, IHC Global published the final report “No Time to Waste: Applying the Lessons from Latin America’s 50 years of Housing policy to Rapidly Urbanizing Countries” in late 2016. The final outcome is an excellent example of the research niche that we fill: synthesizing knowledge and practical experience from a diverse array of publications and experts to highlight solutions that are actionable and evidence informed.
‘Reducing Urban Poverty’ Essay Competition

For the 7th consecutive year, IHC Global collaborated with the World Bank, Cities Alliance, the Woodrow Wilson Center, and USAID to cosponsor the “Reducing Urban Poverty” graduate student essay competition. The competition saw over 100 submissions, all evidence of an impassioned and innovative new generation of emerging urban scholars. This contest is part of IHC Global’s focus on young scholars and practitioners.

This year’s winning paper, entitled “Refugees, Incremental Housing, and Shelter in the 21st Century”, was coauthored by MIT graduate students Valeria Vidal Alvarado, Francis Goyes and Sera Tolgay. Their timely research explores an innovative refugee housing program in Northern Jordan and how it manages to increase refugee housing provision with minimum disruption to existing urban systems.

Alvarado, Goyes, and Tolgay presented their findings to a captivated audience at the Habitat III conference in October. IHC Global President and CEO Judith Hermanson served as a discussant at this event and commended the authors for their important contribution to what is an increasingly complex and pressing issue.
**Knowledge Sharing**

IHC Global promotes and enables knowledge sharing that connects local and global and links policy and practice. In a two-way interchange, we provide policy and practice recommendations in order to inform local planning and catalyze local action, as well as bring local solutions and realities into broader policy conversations.

**Habitat III Highlights**

A delegation from IHC Global was pleased to attend the Habitat III conference in Quito with special accreditation. IHC Global was selected to host two networking events at the conference, one which focused on successful people-public-private-partnerships (PPPPs), and one which focused on inclusive and holistic sanitation strategies. Both networking events drew large, engaged audiences who contributed substantively to the discussions and aided in the transfer of knowledge. In addition, the IHC Global delegation participated in a number of panels on a range of subjects including leveraging housing partnerships, engaging children and youth in implementation of the New Urban Agenda, effectively monitoring and evaluating housing practice, and making cities affordable.

**Full List of Habitat III Panels in which IHC Global Played a Key Role**

- Triple win: people, public, and private partnerships for more livable cities and communities
- Intersections: Bringing together necessary elements for Inclusive, Sustainable Sanitation Strategies in Cities
- No Time to Waste: Lessons from 50 Years of Housing Policy Experience in Latin America
- Housing at the Center: Establishing a Community of Practice that will engage in M&E
- Evidence from Practice for Action: Ensuring Informed Implementation of the New Urban Agenda
- Reducing Urban Poverty Graduate Student Paper Competition: Presentation by Grand Prize Winner
- IHC Global Youth Membership initiative launch
- The City We Need is Affordable Campaign- Urban Planning Dialogue
- Children and Youth Assembly: Civil Society Panel
- Beyond Bricks and Mortar: Leveraging Partnerships for a New Approach to Housing
In 2015, IHC Global embarked on an ambitious new strategy, adopting a new mission focused on advancing more equitable urban development. This past year, one of our key efforts to realize this new strategy involved an extensive website re-conceptualization as a knowledge resource for members and others. Part of our mission is to connect policy and practice, to bring local and global perspectives together, and to create products that are both actionable and evidence informed. Our new website serves as a visually compelling and user-friendly tool that makes policy discourse and academic research available to members and visitors in a “user friendly” manner that facilitates transfer and application of practice and knowledge. In the coming year we will continue to enhance the website’s ability to serve as a knowledge platform and resource hub.

Looking Forward

IHC Global recognizes that the city of the future is both “smart” and “just.” We are at the nexus between the Smart Cities and the Just Cities movements.

At this time of great uncertainty and growing skepticism of global engagement, IHC Global remains committed to growing our network and coalition to address the vexing challenges of the 21st century that converge in cities. We will continue to advocate for greater equity and equality as fundamental building blocks of a secure and stable world. Our efforts will focus on areas of high inequality.

The underlying theme of IHC Global’s work is that the city of the future is both smart and just. The city of the future uses technology and data to advance inclusive and equitable urban development.

To this end, IHC Global will focus its efforts on six key urban issue areas to drive greater equity, hosting policy dialogues, engaging in research and disseminating knowledge and delivering expert, hands-on assistance and advice. Policy and practice in these areas either drive or inhibit equitable development. They are:

- Housing (including in situ, comprehensive urban upgrading)
- Water and sanitation
- Food security
- Resilience and climate change adaptation
- Migration and its implications
- Secure tenure, land, property rights and markets, with a gender focus

In light of Africa’s rapid rate of urbanization, IHC Global plans also to engage more closely with issues specific to sub-Saharan Africa and will undertake a research project that illuminates the role of housing in highly unequal urban areas. In addition, IHC Global will advance policies and practices and foster inclusive urban growth including stimulating job creation and the bridging of the formal and informal sectors. Since financing is a key element in each of the policy areas, IHC Global will also prioritize advancing and disseminating knowledge about alternative financing mechanisms.

IHC Global will continue to support the achievement of Global Goal 11 through its work with members and engagement with other coalitions and institutions. We will continue to emphasize the important role of all stakeholders in achieving sustainable and inclusive cities. We will seek to tell the stories of cities and their people, showing what works and why, making the information accessible to practitioners and policymakers alike.

We will build intentionally on the global momentum gained at Habitat III as we continue, day to day, to advance equitable urban development around the globe.
